Abstract: Public health emergencies have always been highly valued by government departments. At present, with the frequent occurrence of public health events in China, health education has been paid more and more attention. Therefore, it is necessary to carry out overall planning, systematically publicize various public health emergencies, and evaluate their feasibility to ensure that they play their due role and influence in public health emergencies. Therefore, the basic strategies of health education for public health emergencies are discussed in this paper.

Keywords: Public health emergency; Health education; Basic strategy
