Analysis of Clinical Manifestations and Psychological Status of Patients with HPV by Nursing Intervention

Tingting Xue

Tibet University Lhasa 850000

Abstract: The purpose of this study was to investigate the clinical and psychological efficacy of nursing interventions for patients infected with human papillomavirus (HPV). This study mainly selected a number of HPV infection patients in a hospital in Qingpu District, Shanghai, to provide a series of scientific nursing intervention for patients and statistical comparison of the actual intervention effect, so as to analyze the statistical results and draw a conclusion, It is expected to provide some theoretical reference for improving the cognitive level of HPV infection, enhancing the psychological resistance to stress and improving the quality of life of patients.

Keywords: HPV patients; Clinical psychological status; Nursing intervention
