Application of Comprehensive Nursing in Acute Organophosphorus Pesticide Poisoning

Xiao Ma

Xuzhou Cancer Hospital Jiangsu Xuzhou 221000

Abstract: Objective: To explore the application of comprehensive nursing in acute organophosphorus pesticide poisoning. Methods: 50 patients with acute organophosphorus pesticide poisoning in our hospital from November 2021 to September 2022 were divided into two groups by double-blind randomization. The control group was given routine nursing, and the experimental group was given comprehensive nursing. The quality of life, anxiety, job recognition and hospital stay were compared between the two groups before and after nursing. Results: The quality of life of the experimental group was higher than that of the control group, the anxiety was lower than that of the control group, the recognition of work was higher than that of the control group, and the length of hospital stay was shorter than that of the control group, P<0.05. Conclusion: The comprehensive nursing effect of patients with acute organophosphorus pesticide poisoning is definite.
