Research on Nursing Progress of Patients with Sepsis Treated with CRRT

Dongdong Wei

Longhua Hospital Shanghai University of Traditional Chinese Medicine Shanghai 200032

Abstract: In recent years, the incidence of sepsis has been increasing year by year, which has posed a serious threat to the life safety of patients, exerted a great impact on their quality of life, and brought great harm to patients. The pathogenesis of sepsis is relatively complex, which is related to severe acute kidney injury, and the mortality is relatively high. Therefore, it is necessary to pay great attention to sepsis in clinical practice and adopt scientific and effective treatment methods, so as to successfully save more patients' lives. According to relevant investigations, CRRT has made great progress in the clinical treatment of sepsis in recent years, and achieved relatively satisfactory therapeutic effects. Therefore, this paper mainly reviews the clinical progress of CRRT treatment and nursing in sepsis patients, in order to provide reference for relevant personnel, as follows.
