Bishan Hospital of Chongqing Chongqing 402760

Abstract: The occurrence of COVID-19 has greatly affected people's lives. In order to make COVID-19 patients better treated, the relevant system of the hospital needs to be improved and improved to a certain extent. This paper studies the operation and management of makeshift hospitals during the COVID-19 epidemic prevention and control period, and analyzes the number of patients treated, the use of wards, and the management of medical staff, so as to better realize the reasonable operation of the hospital process, improve the efficiency of medical treatment, and ensure the safety of people's lives.
