

急诊护理安全风险防范新进展

张 静

上海中医药大学附属龙华医院 上海 200032

【摘要】: 在医院系统中, 急诊科是一个风险较高的科室, 该科室患者的病情速度变化快、患者数量多, 并且大多数属于急危重症, 明显加大了救治难度, 如果不能为患者提供有效、及时的救治和护理, 将会使护理不良事件、护患纠纷的发生风险明显增加。因此, 在急诊护理工作中需要强化对患者的风险防范。

New Progress of Emergency Nursing Safety Risk Prevention

Jing Zhang

Longhua Hospital Shanghai University of Traditional Chinese Medicine Shanghai 200032

Abstract: In the hospital system, the emergency department is a department with high risk. The patients in this department change rapidly, have a large number of patients, and most of them are acute and critical, which significantly increases the difficulty of treatment. If effective and timely treatment and nursing are not provided for patients, the risk of nursing adverse events and nurse patient disputes will increase significantly. Therefore, we need to strengthen the risk prevention of patients in emergency nursing.
