Abstract: Food and drug inspection is related to the food safety of the Chinese people, the guarantee of food and drug safety, and the long-term peace and stability of China's food and pharmaceutical industry. To this end, the national government continues to strengthen food and drug inspection, and entrust inspection laboratories to carry out food and drug composition identification and quality identification. This paper analyzes the construction principles and internal composition system of the food and drug inspection laboratory, studies the specific measures and management of the laboratory quality control, so as to continuously improve the work quality of the food and drug inspection laboratory, and hopes to continuously promote the development and progress of the inspection industry.
