Abstract: Objective: To explore the application of diversified nursing innovative service mode in health management center. Methods: 98 patients were randomly divided into two groups. The routine group received routine physical examination and nursing intervention, and the experimental group received multiple role nursing intervention. The effects of the two groups were analyzed. Results: without the interference of other factors, the satisfaction of patients in the experimental group was better than that in the conventional group ($P < 0.05$). Conclusion: the diversified innovative service mode has a positive impact on the efficiency of physical examination and the health of patients. It is necessary to pay more attention to the physical and mental health of patients. Meanwhile, the health management center should take safe and effective nursing measures to intervene patients. The diversified nursing innovative service mode has significant effects, which can improve the accuracy and effectiveness of nursing work, enhance the risk identification and prevention ability of nursing personnel, provide scientific guidance for patients, effectively reduce the probability of risk events, ensure the health and safety of patients, improve the nursing experience of patients through high-quality nursing services, and ensure the efficient and orderly progress of physical examination, It can help patients maintain a positive attitude and promote the improvement of the overall nursing management system of the health management center, which is worthy of clinical promotion.
